

Group 3 Iteration Reports

Iteration #1

What went right?

- Communication on Slack was strong, useful, and frequent
- Branch management was effective and clean
- Development tasks were ambitious for iteration 1 yet still completed
- Full vision and implementation path for project seems to have been actualized

What went wrong?

- Onboarding to GitKraken was slow which slowed task board assignments a little
- Requirements document baselining was put off a little longer than necessary

Remedies?

- More detailed breakdowns for document related tasks on task board
- Longer runway allotted for onboarding in the future if new tools brought into the project
